Application/Control Number: 10/612,833

Art Unit: 3738

DETAILED ACTION

Page 2

- 1. Applicant's RCE and amendments dated 1/16/07 have been received in application serial number 10/612,833. Claims 2-15 have been canceled. All comments have been taken into consideration.
- 2. The previous claim rejection dated 1/19/06 under 112 first paragraph has been withdrawn based upon the amendment of 1/16/07.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-7, 16-28, 37-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ouriel et al 2004/0117003 in view of Hoffman Jr. et al. 5,197,977 and further in view of Van Tassel et al. 6,719,778.

Ouriel et al. discloses the invention as claimed noting figures 1-13 comprising:

A method for treating an aneurysm with an aorta by implanting a device with a stent

.

Art Unit: 3738

member and a therapeutic agent-carrying ember such that the stent is anchored within the aneurysm between one or more renal arteries and the therapeutic agent-carrying member extends toward the aneurysm wherein the member release at least one therapeutic agent outwardly to a location on the aortic wall near the (see [0123]); wherein the device has at least one stent member for engaging a portion of a blood vessel in which the aneurysm is located (44); wherein the device has a tubular member coupled with the stent member (30); wherein the device also has a first stent member for anchoring (46) the device and a skirt member; the skirt member having a proximal end (40) and a distal end (16 converging area) the skirt member extending from the stent in a direction towards the aneurysm; wherein the device also has a second stent member coupled with the first stent member (42, 48).

However Ouriel et al. does not limit the type of drugs that can be associated with the device. Hoffman, Jr. et al. is being utilized to teach that drugs such as collagen and antibacterial agents such as tetracycline have been known to be affiliated with prosthetic devices particularly to treat aneurysmal repair (see col. 5,lines 59-70 and col. 6,lines 13). It would have been obvious to one having ordinary skill in the art at the time the invention was made to take the invention of Ouriel et al. and incorporate collagen and/or tetracycline as taught by Hoffman, Jr. et al. to the device of Ouriel because both Ouriel suggest in section [0123] that varying biological, physical and/or chemical properties may bee associated with the device and further both Ouriel and Hoffman use bifurcated, polymer based grafts used for the treatment of aneurysms and both polymers and devices are capable of carrying such agents. Also it is obvious that

Art Unit: 3738

because the entire device of Ouriel et al. is disclosed as be coated on the external surface that this would also include the skirt, which extends from the "anchor" (stent).

However, to further teach that drugs such as tetracycline are well known to slow dilation and weakening of the wall of the aorta, Van Tassel t al. 6,719,778 sates in col. 2, lines 20-25 that: "Drugs such as tetracycline have been used to prevent abnormal vascular dilation..."The tetracycline compounds protect the elastic fibers of the media by selectively inhibiting the elastolytic activity in the region thereby preventing its expansion". There fore it is obvious to take the primary structure of Ouriel et al. and apply these drugs as taught by Hoffman Jr. and Van Tassel in order to repair the abdominal aortic aneurysm (AAA) prosthetically and to prevent future rupture of the area.

Response to Arguments

4. Applicant's arguments filed 1/16/07 have been fully considered but they are not persuasive. Applicant has amended the claims and contends that Ouriel does not suggest delivering a therapeutic agent that would slow the dilation and weakening of the aorta wall. The examiner has explained above the Ouriel has been used to teach the structure as claimed. Further Ouriel discloses that biological, physical and chemical components may be associated with the modules. Ouriel does not limit the components nor does he limit the locations of where they are applied. The examiner has introduced Hoffman Jr. and Van Tassel to teach that there are components/agents such as

Page 5

collagen and tetracycline that have been known to slow the dilation of a weakened aortic wall and these agents have been affiliated with various prosthetic dévices.

Therefore the 103 rejection is deemed proper.

Applicant further argues that Hoffmans drugs i.e. collagen are released into blood flow and not into tissue or any other structure surrounding the graft. The examiner will point out that blood is a tissue or known as Blood Tissue (see attachment) therefore meets the claim limitation of "... into tissue or any other structure surrounding the graft.." because the collagen as alleged by applicant are released into the flood flow.

Applicant further argues (see page 7 of arguments) that independent claim 21 distinguishes over Ouriel because there would be no equivalent to the now claimed liiac legs which extend through the skirt. The examiner points out that the current amendment to claim 21 deletes all mention of a "skirt" and further does not mention that "legs extend through the skirt".

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Suzette J-J Gherbi whose work schedule is Maxi-Flex off every other Friday and whose telephone number is 571-272-4751.

The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306.

Blood Tissue

- a red blood cell (rbc)
- b -> white blood cell (lymphocyte)
- c -> white blood cell (neutrophil)
- d -> white blood cell (eosinophil)
- e → plasma (matrix)
- * found: in the circulatory system
- function: carries oxygen, Carbon dioxide, ions, nutrients and wastes to and from the cells; contains cells for immune response (wbc).
- Try a "Hole Quiz"
